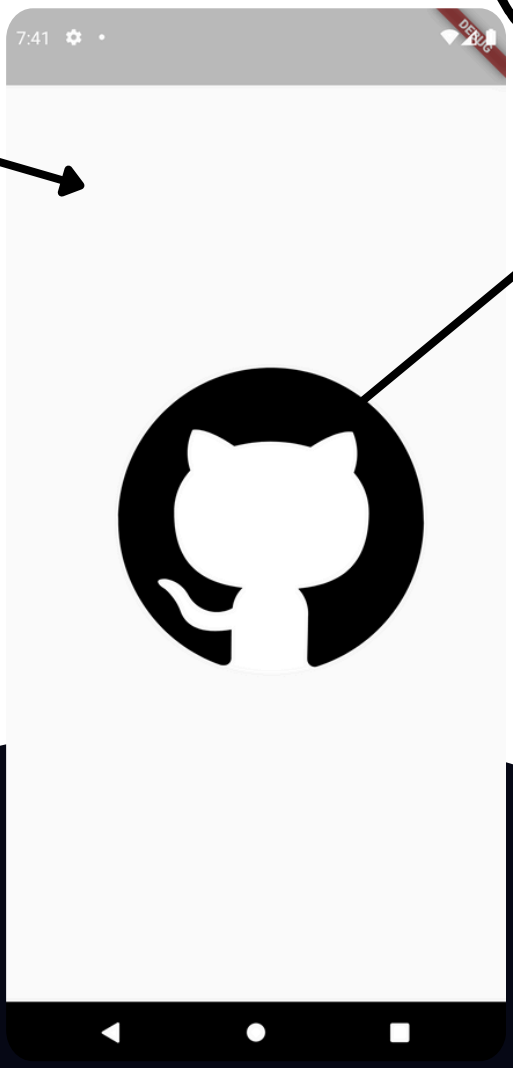
Splash Screen

I used a white background like the GitHub app.

This is an animated GitHub image for decoration.



This is the splash screen of the GitHub app

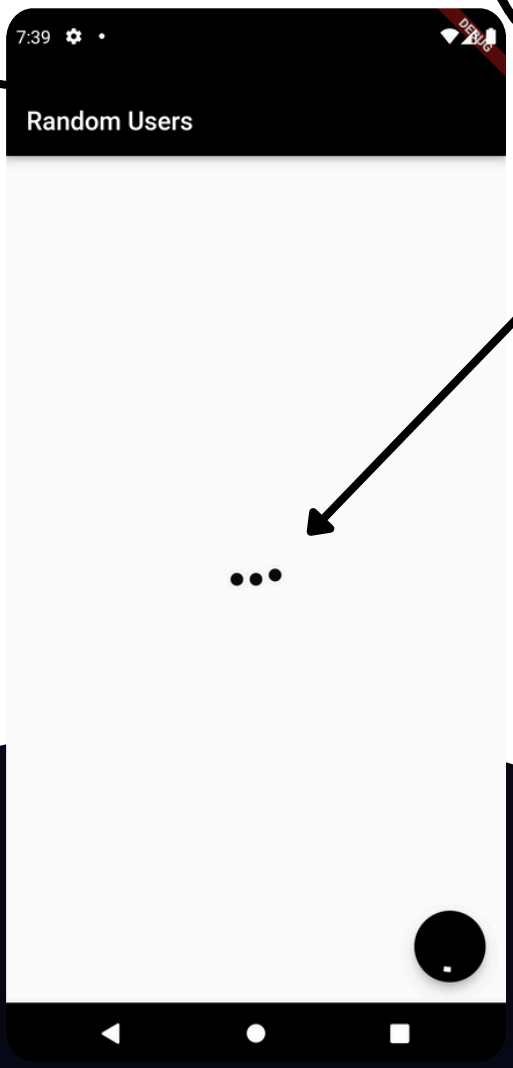
Home Screen

Black app bar aligned with GitHub's color scheme.

Show loading widget while the app is calling the API.



This is the home screen where the user list is displayed, and it includes a loading widget to inform users of ongoing activities in the app

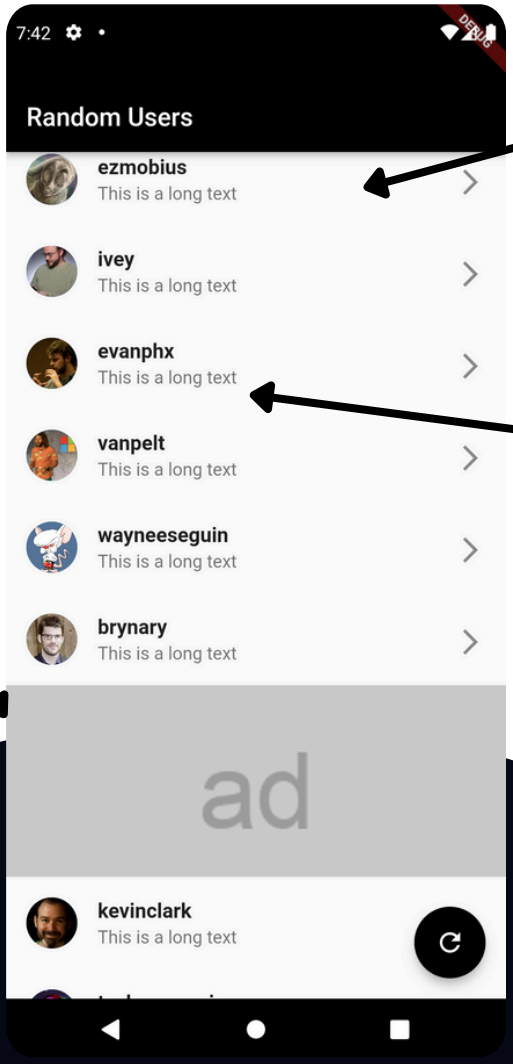
Home Screen

Advertisements are displayed with a height of 150 pixels, even though the image is 500 pixels wide. This is to ensure that long images do not negatively affect the user experience.

GitHub users are displayed while maintaining a consistent spacing of 8 pixels and 16 pixels for visual consistency

I added small text to better mimic the WhatsApp design



The most important aspect of this page is the spacing, which is consistently set at either 8 pixels or 16 pixels. Additionally, the text size is standardized to ensure visual comfort.

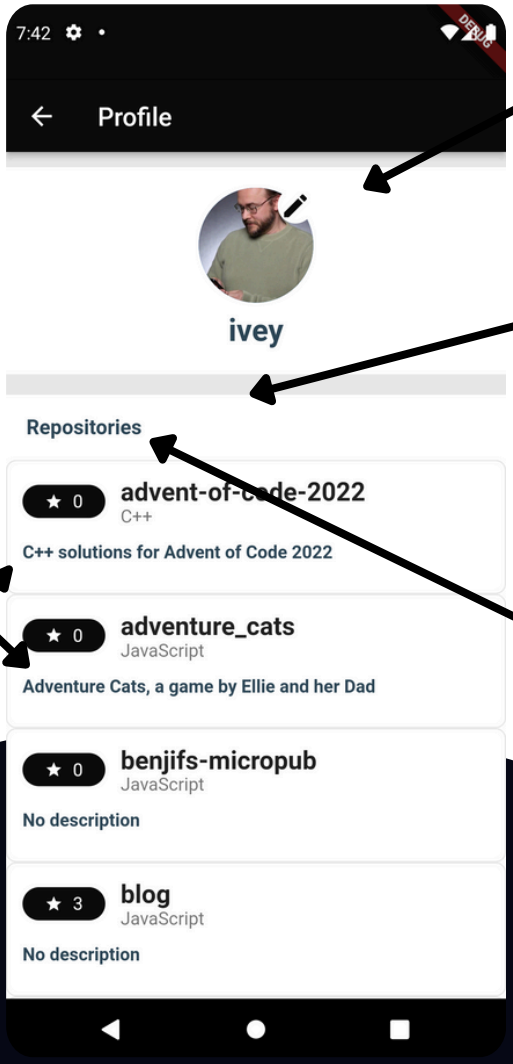
Profile Screen

The gray lines are used to visually separate elements, providing a distinction beyond just simple spacing

The profile picture is quite large, and the name is prominently displayed, mimicking the WhatsApp design. This approach gives importance to the section and attracts attention.



This thin gray line is used to clearly separate sections for the user.

The blocks are separated by small black circles for a more balanced appearance. The title and subtitle follow a list title layout.

The page title is important for indicating to the user what they will be seeing.

The profile page displays the user and their repositories. Consistency in colors and spacing is the most important aspect, and the text font is also standardized.
